

Runtime API Security Radically Simplified.

ProtectOnce provides fast growing SaaS companies with a free agentless solution that secures API-driven applications in a matter of minutes, providing deep visibility into all APIs and helping to prevent complex attacks.

API Security: More crucial (and complex) than ever

Modern API-driven applications are extremely complex and ever-changing. While APIs fuel growth and development speed, they expose the business logic of the application and make it a prime asset for attackers to target. Legacy WAFs are not enough, while modern solutions are too complex and expensive to run.

This problem is especially tricky for growing SaaS companies that are often short on security personnel and resources. These startups need a one-stop-shop solution that can secure their modern, API-driven web applications without endless configuration and fine tuning, and without huge costs. In today's API security market, this is a pretty big ask.

ProtectOnce sets out to radically simplify API and application security with an agentless solution that takes minutes to deploy, extremely easy to use and provides deep security visibility and threat detection immediately.

The ProtectOnce dashboard

How ProtectOnce works

ProtectOnce's agentless solution reveals all of your APIs (REST, SOAP, GraphQL), including zombie and shadow ones, to provide customers with a complete inventory and posture of their APIs.

ProtectOnce then applies data analysis models to combine this deep visibility and inventory with behavioral data collected over time, to detect and expose attacks on your APIs as they are planned.

ProtectOnce allows you to expand your security to the workload level with the solution's in-app deployment. The in-app library helps customers to apply real time attack blocking only where they need it the most, without impacting their application's performance or creating overhead.

This allows you to enjoy both a no friction agentless discoverability and visibility, and a light-weight inline blocking where your crown jewels are.

Product features

- Get a real time inventory of all APIs serviced from your environment.
- Understand the security posture and risk level of your API endpoints with ProtectOnce's risk score.
- Understand the data flow and security threats of your application with ProtectOnce's application map.
- Real time detection techniques on your API traffic without proxies, gateways, traffic rerouting or anything that will interfere with your app's performance.
- Detect complex API attacks such as BOLA with ProtectOnce's advanced threat detection.
- Go beyond detection and prevent attacks in real time where your crown jewels are with ProtectOnce's one click in-app deployment.
- Respond to security events through easy integrations with your security ecosystem.
- Integrate with your cloud environment to automatically configure compensating controls when an attack is sensed.

End-to-end visibility & protection

API Discovery & Posture

ProtectOnce automatically and continuously inventories your APIs, helping you keep track of all your public facing assets, detect any blindspots in your posture, and assess risks associated with your APIs.

API Protection

Protect your APIs from sophisticated attacks by combining deep visibility with behavioral data and the context of your app, to detect and prevent attacks before they happen.

API Threat Response

Easily respond to security events and automatically configure compensating controls.

| About ProtectOnce

As a group of SaaS developers and cyber security entrepreneurs, application & API security has always been a pain point.

In today's cloud-native world, developing and deploying web applications is easier than ever, however properly securing them has never been more complex.

This is why we built ProtectOnce. We believe that quality API security should be accessible to all companies, big and small, without having to invest endless resources and manpower.

With ProtectOnce, growing SaaS companies can get API visibility, discoverability and protection for free, with an automatic, out-of-the-box approach.
